

## PAWA Repeater Acceptable Use Policy

1. All operations on the PAWA repeaters will be in accordance with Part 97.
2. Directives of the repeater trustee and control operators will be adhered to at all times.
3. Strive to be courteous to others. With all the diverse personalities' on-the-air nowadays, this can, at times, be trying.
4. Accept breaks as normal occurrences in amateur radio -- not an intrusions to your 'private service. Some hams do not always exercise their best discretion in breaking into existing conversations.
5. Listen for a short time before you transmit on a repeater. Use common sense on this one. Don't just switch over to a repeater channel from another frequency and immediately start transmitting unless your situation requires it!
6. Limit your time on the repeater to within reason. This can vary a great deal and will depend upon the circumstance, but rag chewing is not recommended - especially during the morning and evening drive times and is not a friendly practice either way! Remember to ID as required every 10 minutes.
7. Talk to strangers once in a while. Many hams, all good people, slip into a habit of not talking with anyone they don't already know when operating FM repeaters. When talking to them, be sure to mention the PAWA and invite them to attend a meeting or function, and give them the web site address.
8. If you're a tight, efficient operator, you may be proud of yourself -- but there's a problem. When you're on the repeater, no one else can get in edgewise! Every now and then, vary your timing to give others a chance to get in, especially when keying up to transmit. Give it a second or two before keying up to reply so that a breaking station can get in.
9. If you're operating too loosely on a repeater with long gaps in between transmissions, do not be surprised if another operator suddenly uses the repeater! They are completely within their rights, and have not committed any error. It is then your responsibility to politely inform them of any "group activity" involving the repeater at that time, such as parades, weather nets, etc.
10. The PAWA repeaters are supported by its' members. Although they are "open repeaters", members have priority over non members. Non members should be invited to join the club to help sponsor and support the repeater. Non members should treat the repeater as if they are a guest in someone's home. Regular users of the PAWA repeaters are encouraged to support the repeaters by becoming a member of the PAWA as either a full or an associate member or making a donation to the PAWA for repeater support. A donation of \$ 12.00 per year is suggested.
11. Strive to use acceptable language over VHF and UHF repeaters. Controversial as it may seem, what is acceptable tends to vary from one part of the country to another, but placing some reasonable limits on language helps set better standards for Amateur Radio. Q-Codes or "Q Signals" should be avoided and are not used on the repeater. Q-Code and Q-Signals were made for CW. Use of the ITU standard phonetic alphabet is desirable and this practice is encouraged especially when checking in to a net.
12. Keep your conversations upscale and in line with others. There is no room on the repeaters for know-it-all types or people who constantly put people down or harass others. Be nice and treat others with respect and they will respect you. The "Golden Rule" rules.
13. Keep your language clean. There are many people from all walks of life that use the repeater and many

more who just listen. Be respectful of others and keep your conversation clean. Act your age, and be aware that others who may not like their children listening to this type of language have the same rights to enjoy using the repeater as you do. If you cannot have a conversation with someone without using these words, then do it elsewhere. Also, keep in mind that many young hams are out there, so please set an example we can all be proud of and that exemplifies the proud history of amateur radio.

14. Use simplex channels when they make more sense. Two cars traveling close together should not be using a repeater unless there is some compelling reason, such as looking for another friend to join in, or the contact is going to be brief, etc.
15. Do not be afraid to use the repeater. That's why it's there! No one should question your decision to utilize the repeater for a short to medium contact. For long extended visits following contact, changing to a simplex channel would be most considerate to others looking to use the repeater.
16. Repeater use priorities:
  - a. Emergencies
  - b. Public Service Events
  - c. Nets
  - d. Normal Operations
